

Breast Imaging Record

Name: _____

Dates in Residency From: _____

To: _____

According to the ACGME, residents “must have a minimum of 12 weeks of clinical rotations in breast imaging [i.e., 3 rotation blocks per month]. Each resident must have documentation of the interpretation/multi-reading of at least 240 mammograms within a six-month period during their last two years of the residency program” [Radiology Program Requirements IV.A.5.a).(3)].

Minimum of 12 weeks (approx 3 months) of clinical rotations in breast imaging

Dates of 1 st Rotation: _____	Hospital: _____	Primary Attending: _____
Dates of 2 nd Rotation: _____	Hospital: _____	Primary Attending: _____
Dates of 3 rd Rotation: _____	Hospital: _____	Primary Attending: _____
Additional Rotation: _____	Hospital: _____	Primary Attending: _____
Additional Rotation: _____	Hospital: _____	Primary Attending: _____

To be signed at the end of residency:

This resident completed an ACGME accredited Diagnostic Radiology Residency at Methodist Healthcare, Memphis Tennessee, from _____ to _____. During that time, this resident spent a minimum of three months in the Breast Center involved in all aspects of breast disease from diagnostic to interventional procedures.

During this resident's breast imaging rotations, more than the required 60 hours of Mammography training were met, all under the supervision of a qualified physician. Training this resident received during these rotations include education in Radiation Physics, radiation protection, radiation effects, and continued education in mammography.

This resident met or exceeded the minimum required 240 mammography cases during the final two years of residency.
